SimpleFanController

Release 1.0 alpha

Georg Arbesser-Rastburg

Jul 28, 2022

CONTENTS:

SimpleFanController is a service for controlling and managing fans connected to the GPIO pins of a RaspberryPi.

It's key features are:

- Support for 2-pin and 4-pin (PWM) fans

- Monitoring via a InfluxDB database connector

- REST interface following the OpenAPI standard

- Bearer token user authentication (OAuth2)

- Provided as Python library and Docker images for flexible deployment

---

Warning: SimpleFanController is still under active development and not stable yet!
